COMPANY
PROFILE

There is something that's even
more precious than gold.

It is Blue Gold.

THE VALUE OF WATER

What do we talk about when we talk about water?

An element that we take for granted: we use it to clean our cars, rinse the dishes and wash the roads. All we have to do is turn the faucet on to see it flow. And most of all, for us, water is always and only the drinkable one.

But water is, now more than ever, a truly precious element. So valued to be called Blue Gold. In a word, water like oil. Or even more. It is therefore an asset to save, to recover, to reuse. And to never waste.

Nuove Energie has always worked with water and for water. It started by designing the first microfiltration machines for those industrial sectors that needed to reuse the water used in different applications, and it keeps working today in the civil sector with water recovery and reuse systems.

**A Company that knows water and recognizes its value.
And just like water, it never stopped: beyond the difficulties,
towards the next goals, heading for the future.**

QUALITY IS EVIDENT

Some people are frightened by challenges,
some others are thrilled by them.
Exceeding the limits is our signature.
Permanent and unmistakable.

In every project is held our bravery.
Our capacity to develop ideas out of the ordinary,
our determination to pursue extraordinary results,
our wish to improve ourselves,
our leaning towards experimentation.
Our identification marks.
Since the first day.

Steel is our raw material,
the element we melt to create solutions with a heart
and a soul. Because behind every single product,
there's always a team of people.
Men and women who combine their ability and passion
every day to develop the most advanced technologies
and achieve the most ambitious goals.

We could have let ourselves drifting.
Instead, we have decided to do something more:
build innovative systems, different and unique.
In every aspect. Because there are people who look
forward and people who, like we do, look to infinity.

Nuove Energie.
A name, a story,
a new conception of the future.

NUOVE
ENERGIE.
A NAME,
A STORY,
A NEW CONCEPTION
OF THE FUTURE.

DIFFERENT FROM THE OTHERS,
ALWAYS UNIQUE.

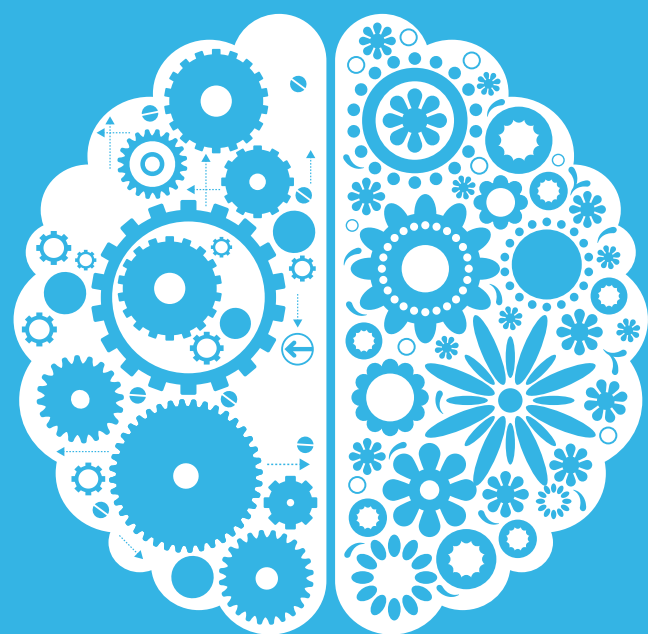

TO BE UNIQUE YOU HAVE
TO BE DIFFERENT:
THIS IS
WHAT WE THINK
AND WHAT WE BELIEVE IN.
SINCE THE FIRST DAY.

Like Nuove Energie there's only Nuove Energie.

Since 1980 we manufacture wastewater treatment machines that are different from all the others, result of engineering intuitions out of the ordinary: it is not a coincidence that they are entirely built in stainless steel, they stand out for revolutionary internal mechanisms and they are internationally patented and certified.

This is the difference between who talks about quality and who knows the deep meaning of it. The difference between who always walks the same roads and who, like us, knows that you'll never be first if you follow the others.

TECHNOLOGICAL THINKING

HUMAN
AND TECHNOLOGY:
TWO DIFFERENT ASPECTS
OF THE SAME COMPANY.

**If technology is the goal, human value
is the way to achieve it: you can't have one without the other.**

One Company, two distinctive features. Strong and outstanding.
The technologic one, which is put into effect with well-advanced products,
and the human one, which is represented by all those people who every day,
with the same effort as ever, develop the highest technology
and the most advanced engineering.

Never stopping.

OUR VALUE DEPENDS ON OUR VALUES.

Our raw material is the grey matter. The grey matter of all those people who add their value to the values of the Company, every day.

Behind a highly technologic product there's a team of highly professional people: ready to listen and prepared to give answers.

They understand each request and manufacture customized machines according to every need, because we have learnt that companies, just like people, are all different from one another. Our technicians follow the customers from consulting to assistance, because progress is only where there's dialogue.

Products change and so do requests, but people remain our constant. And most of all, our strength.

ULTRASCREEN®
INTERNATIONAL PATENTS - U.S. PATENT # 6,500,331 - TITLE 22 APPROVED

RESEARCH
OF EXCELLENCE,
DEVELOPMENT
OF IDEAS.

EXPERTISE,
EVOLUTION AND DEVELOPMENT
ARE NOT SIMPLE WORDS,
THEY ARE REAL AND TRUE
BASIS FOR BUILDING
OUR UNIQUENESS.

There's someone who tries to give their best, and someone who wants to always give something more.

Since 1980 we work to take care and improve every single detail. That's why we have the most up-to-date IT systems, we use advanced instruments, we invest in research, development and engineering day by day. That's why we manufacture entirely stainless steel machines, with a technology different from the others, with less energy consumption.

Today, thanks to the know-how we have gained, to the expertise we have reached and to our view projected to the future, we have a leading role in both industrial and civil market and we keep moving forward towards the next goals. And the next achievements.

OUR PRODUCTS REPRESENT OUR INTRODUCTION.

**Each machine is only equal to itself:
it is impossible to find machines
with the same features in the market.**

Uniqueness, technology and human values.

Each product perfectly sums up these three principles that inspired and guided us along the years. From Conoscreen® to the Vanguard® technology, from the Compactor® press to the special Septinguard® system and to the extraordinary Ultrascreen®: each machine is the direct reflection of our thinking, where the absolute quality is the only possible goal.

100% Stainless steel
Extraordinary resistance,
triple water flow and compact dimensions.

Above-ground installation
Lower operational costs,
easier ordinary maintenance.

Energy savings
Machines are made for a lower
energy consumption.

Simple to use
Intuitive working principle,
least human intervention.

Simplified maintenance
Machines are built to make
technical services easier.

Simple to transport
The compact dimensions allow
easier transportations and lower costs.

A NUOVE ENERGIE
MACHINE ALWAYS HAS
THAT EXTRA BIT.

• **Ultrascreen®**

A microfiltration machine that can be used for many different applications:
from industrial and municipal wastewater to the aquaculture.

• **Conoscreen®**

The microfilter designed for all those industrial sectors where it is necessary to recover
the raw material and reuse the water.

• **Vanguard®**

An in-channel self-cleaning belt-screen that separates coarse solids from civil and industrial
sewage water.

• **Septinguard®**

Self-cleaning screening plant for the separation of coarse solids from tanker water.

• **Compactors and conveyors**

Piston press, screw conveyor, screw compactor and screening screw:
different machines designed to compact and transport civil and industrial waste.

• **Plants**

The continuous research led to the development of membrane ultrafiltration plants, specific systems
for the industrial water treatment and technologic solutions for the energy recovery.

CERTIFIED
PRODUCTS.

EVERYTHING WE DESIGN
IS GETTING MORE
AND MORE KNOWN
AND RECOGNIZED:
EUROPEAN, AMERICAN
AND JAPANESE
CERTIFICATIONS PROVE THAT.

Patents are not only an award for what we do,
but also a guarantee for our customers to buy a product that has passed all the tests
and met all the regulatory requirements, before being marketed.

If the certifications we have obtained in these years represent the real value of what we
have created, our wish to keep exceeding our customers' expectations spurs us in the designing
of our next machines.

OUR
MARKET
IS THE WORLD.

**It's easy to find Nuove Energie all over the world:
our dealers export the excellence of our machines in every country.**

The Italian engineering tradition goes beyond the national borderlines.
Scenarios and markets change: what doesn't change is the approach
of a Company with a deep international aptitude.

Today, a widespread sales network allows us to have a leading role in every country.
We guarantee assistance to all of our dealers, consulting and a brand more and
more known every day: Nuove Energie.
